CH7-2 · 原书142页 An action in the vicinity of the castled king can be carried out by any of the pieces, but the long-range ones, the queen, rook, and bishop, are the most effective. They can attack from a distance along the ranks, files, and diagonals. The line concerned has to be 'captured,' i.e. one's own long-range piece has to be placed on it, confrontation by the opponent's corresponding piece has to be overcome, and the line has to be 'cleared' of all enemy influence. Outposts lie on such lines; batteries and pins take place along them. In a mating attack the line may finally witness the execution, i.e. checkmate. In this chapter we shall consider in turn the part played in the attack on the castled king by the ranks, files, and diagonals and reveal some typical operations involving them.	CH7-2 · 原书142页 任何棋子都可以在易位王附近采取行动，但最有效的是后、车、象这些远程棋子。它们可以沿横线、直线和斜线从远处发起攻击。有关线路必须先被“夺取”：把己方的远程棋子部署其上，战胜对方相应棋子的抵抗，并“清除”敌方对这条线路的一切影响。前哨位于这些线路上；叠子攻击和牵制也沿这些线路展开。在将杀进攻中，这条线路最终还可能成为行刑之地，即完成将杀。本章将依次考察横线、直线和斜线在攻击易位王时的作用，并介绍沿这些线路展开的一些典型行动。

CH7-5 · 原书142页 This position is from Bernstein-Capablanca, Exhibition Game, Moscow 1914. It is White's move, and he ought to have realized that because of his weakness on the back rank Black's pawn on c3 was 'taboo'. He should therefore have played 1. Nd4, but he decided not to, and the result was a disaster on his back rank.	CH7-5 · 原书142页 此局面出自伯恩施坦—卡帕布兰卡，莫斯科表演赛，1914年。轮白方走，他本应意识到：由于自己的底线薄弱，黑方c3兵是碰不得的。因此白方应走1. Nd4，但他另作选择，结果底线遭到毁灭性打击。

CH7-17 · 原书144页 This position is from the game Alekhine-E. Cohn, Stockholm 1912. White, to move, must try to retain his extra pawn. A 'realistic' tournament player would quietly play 1. Rfe1 c5 2. Ndf3 and if 2... Bxc2, then 3. Rc1, or if 2... f6, then 3. exf6 Rxe1+ 4. Nxe1, etc. However, this seemed too limp a solution to the young Alekhine, who wanted to keep Black's knight in its corner at h6 a little longer; in a typically 'incisive' way he defended the pawn on e5 indirectly, or rather 'sold it for the back rank', and this is in fact as good a method as that given above. CH7-30 · 原书145页 · 纳恩编者注 [1] An interesting moment. After 2... Rf6 3. Ngf3 Re8, as Vuković gives, it is hard to see what White has gained in return for surrendering his extra pawn. Of course, White retains a positional advantage, but this is far from conclusive. Curiously, in the English edition of his best games collection, Alekhine does not mention 2... Rf6, but in his Deux Cents Parties d'Echecs he gives “On 2... Rf6, White wins by 3. Nf5!, etc.”. Probably both 3. Ngf3 and 3. Nf5 are wrong; the strongest line is 3. Nc6! Re8 (3... Rxf1+ 4. Kxf1 Re8 5. Rd7 is also very bad) 4. Ne7+ Kf8 5. Rfe1!, threatening 6. Nxg6+, and Black's position is hopeless (5... Bf5 6. g4 or 5... Bc2 6. Rd2). One might now say 'and White won after another twenty moves', for this position no longer has anything to do with the difficulties on the back rank, but it is worth remarking that the task is a difficult one, so difficult indeed that Alekhine went astray and after 14... Ra1+ 15. Kf2 Kd5 16. Kf3 a5 played 17. Ke2? (17. Ncd2 was correct). This was answered by 17... a4! (not 17... 现在也许可以一句“又过了二十步，白方获胜”带过，因为局面已经与底线困难无关。但值得指出，白方取胜相当困难，难到阿廖欣也出了差错：14... Ra1+ 15. Kf2 Kd5 16. Kf3 a5之后，他走了17. Ke2?（正确的是17. Ncd2）。黑方应17... a4!（不能17... Kxe4?，因为18. c6!），客观而言，白方此后至多只能求和。不过阿廖欣不愿接受18. Nc3+ Kxc5 19. Nxa4+ Kd4，而冒险走18. Ncd2? a3 19. b4 Rc1!，反而陷入败势。接着20. Kd3 a2 21. Nb3 Rd1+ 22. Kc2 a1=Q 23. Nxa1 Rxa1 24. Nc3+，此时黑方本可24... Kc4! 25. c6 Ra7! 26. b5 Rc7获胜，却走了24... Kc6?，破坏了自己的局面。最后是：**25. CH7-36 · 原书146页 Combinations based on the weakness of the back rank are usually of short duration and matters come quickly to a head. This has been shown by the examples given above, and others, equally short-lived, could easily be added to them. However, just as success may come quickly, so too failure can suddenly occur as a result of a lightning counter-stroke which removes the weakness from the opponent's back rank. As an example of such a turning-point let us examine the next position.	CH7-36 · 原书146页 利用底线弱点的组合通常很短，局面很快就会见分晓。上述实例已经说明了这一点，我们也不难补充更多同样短促的例子。然而，成功来得快，失败也可能骤然降临：对方一次闪电般的反击，就能消除其底线弱点。下面的局面展示了这样一个转折。

CH7-50 · 原书148页 In connection with this back-row weakness, something should also be said about the so-called 'escape hole', i.e. the gap made by moving a pawn with the sole purpose of eliminating the danger of mate on the back rank or at least of freeing the rook guarding the rank. On the other hand, such a move, like any pawn move in front of the castled king, represents a weakening of the position, and it is a question here of correctly assessing whether the advantages involved outweigh the weaknesses or vice versa. This is one of the numerous double-edged features of chess.	CH7-50 · 原书148页 谈到底线弱点，还应谈一谈所谓的“气口”：专门走一步兵，为王打开逃生格，以消除底线被杀的危险，或至少解放守卫底线的车。但另一方面，这一步与易位王前的任何冲兵一样，也会削弱局面。关键是正确判断所得好处是否大于造成的弱点，还是恰好相反。这正是国际象棋众多双刃特点之一。

CH7-67 · 原书149—150页 The second rank, on which the pawns stand at the start of the game, is generally as weak as the back rank; the pawns stand on it but do not protect it. There is, however, a difference, in that the second rank is harder to 'clear' prior to its being used by a rook or queen because the pawns tend to get in the way, just as trees in a forest tend to obstruct a clear view. Consequently, weaknesses on the second rank most frequently appear on individual squares or focal-points, and it is rarer to find a general weakness affecting the whole rank. The latter phenomenon, which concerns us here, is generally described as 'a rook on the seventh rank', but it would be more accurate to speak of a strongly-placed queen or rook on the opponent's second rank.	CH7-67 · 原书149—150页 第二横线是开局时兵所在的横线，通常与底线一样薄弱：兵虽然站在这条线上，却不保护它。不过也有区别：为了让车或后利用第二横线，事先“清理”它比较困难，因为兵容易挡道，就像森林里的树木妨碍视野一样。因此，第二横线的弱点通常出现在个别格子或焦点上，整条横线全面薄弱的情形较少。我们这里要讨论的正是后一种情形，通常称为“车占第七横线”，但更准确的说法应是：后或车在对方的第二横线上占据强有力的位置。
CH7-68 · 原书150页 This kind of situation is on the whole exploited for positional purposes (to put pressure on the pawns and capture them or else to prevent the opponent from moving his king into the centre), but the position of a queen or rook on the seventh rank can also be useful in an attack on the castled king, where a 'clearing up' operation is often of decisive importance. CH7-112 · 原书154页 The position can be briefly summed up as follows: gxf3 has undoubtedly blunted the direct attack on the castled king, but it has given an added sharpness to the central position, where White threatens e4-e5 (naturally, after strengthening d4 by means of Ne2 and perhaps Bf5). If White manages to play e5, a turning-point in the situation is reached and White, on the basis of his power in the centre and his expulsion of the bishop from f6, obtains a strong attack, in which the open g-file also comes in very useful. Turning-points of this kind can be very instructive. CH7-166 · 原书159页 One of the most important types of attack along the h-file is that which involves the doubling of the heavy pieces on the file, threatening mate at h8. If the enemy king's flight squares on the second rank are occupied by its own pawns, then the attacker must concentrate his effort on doubling his heavy pieces as rapidly as possible and mate his opponent at the focal-point h8. However, if the king has a square to escape to or there is a threat to get one by moving the g-pawn or f-pawn, attention must be turned to this possible means of defence. The most economical formation against this, as far as the use of attacking material is concerned, is one with an assault pawn at g6 and a defending one at g7. The continuations from the following diagram are devoted to this typical formation (with colours reversed).	**CH7-166 · 原书159页** 沿h线进攻最重要的类型之一，是将重子叠在线上，威胁在h8将杀。如果敌王在第二横线上的逃生格被自己的兵占据，进攻方就应集中力量，尽快叠重子，在h8焦点将杀对方。但如果王已有逃生格，或可能通过移动g兵、f兵获得逃生格，就必须注意这种潜在防守。就投入的攻击子力而言，最经济的应对配置是：进攻兵在g6，防守兵在g7。下图的变化专门说明这一典型配置，只是双方颜色相反。

CH7-167 · 原书160页 In this example Black is the attacker. He has already sacrificed his queen in order to reach this position, his intention being to mate White's king with a rook on h1. Doubling rooks is not a problem for Black in this position, but he is involved in a struggle for f2, which is important as a flight square for the white king. There are two methods of handling this: the king can be allowed to get out and a mating net then woven round it, or the formation with the pawn at g3 and doubled rooks can be set up. Both courses lead to success in this position, and both do so in two ways, so that in all Black has four lines which lead to victory. CH7-177 · 原书161页 In the above diagram doubling rooks was an easy task, but the crux lay in controlling the squares which the king might use for its escape. However, there are cases where the problem lies in actually doubling the rooks on the intended file. As a rule a necessary condition for this is that the attacker's back rank should be clear of other pieces so that the rooks can be moved at will. When the rooks on a given rank cover each other, they are said to be 'united'. Naturally, being 'united' can also apply to a queen and rook. The continuation from the following diagram is instructive in this context. CH7-192 · 原书163—164页 Of the various formations on the h-file the most important in practice is undoubtedly that with a rook on h1 and pawn on h4. It is a good representative example of battery attacks with rook and pawn which are created when the pawn captures an opposing piece and thereby opens up the file for the rook. This situation is often engineered by placing another attacking piece on the square covered by the pawn, creating threats which induce or oblige the opponent to take it. There are two other methods of exploiting the formation of rook and pawn — one is to simply advance the pawn, the other involves switching the rook on to another file (e.g. with rook on h1 and pawns at h4 and g2, moving the rook to h3 and then to g3).	CH7-192 · 原书163—164页 h线的各种配置中，实战最重要的无疑是车在h1、兵在h4。它是车兵叠子攻击的典型：兵吃掉敌子，从而为车开放直线。这种局面往往这样促成：把另一枚进攻棋子放到兵保护的格子上，制造威胁，诱使或迫使对方吃它。车兵配置还有另外两种利用方式：一是直接推进这个兵，二是把车转到另一条直线；例如车在h1、兵在h4和g2时，车先到h3，再转g3。

Thus, the game could go on for a few more moves with the knight on g5 en prise, until the critical moment came to decide on the exact significance of the knight's position: either White's attack would break through, or Black would take the knight without any ill-effects to himself, or thirdly White might simply withdraw the knight from g5. CH7-243 · 原书168页 · 纳恩编者注 [1] This contention seems highly dubious. After 13... Nc4, attacking b2 and threatening 14... e5, White is clearly worse. Black has two central pawns for the piece, White's king is trapped in the centre and his pieces are hopelessly tangled up on the kingside. Therefore White should prefer 12. Nf3, with a double-edged position.	CH7-243 · 原书168页 · 纳恩编者注 [1] 纳恩注：这一判断非常可疑。13... Nc4攻击b2并威胁14... e5之后，白方明显较差。黑方以两个中心兵补偿所弃的一子，白王困在中心，子力也在王翼乱成一团。因此白方应选12. Nf3，局面双方均有机会。

Bxg6 Nxa1 the queens are exchanged and White is a whole rook down. Ne2 c5 11. c3 White is the better placed, but his attack is delayed and Black is not without counterplay) 10... Bxf6. The situation is then easier for Black, for as a result of the exchange on f6 an extremely important attacking unit has disappeared, namely White's pawn on e5. Sacrifices in this position are therefore not worthwhile; after 11. Bxh7+ Kxh7 12. Ng5+ Kg8 13. Qh5 Black has an adequate defence in 13... Qd7, while if 11. Ng5, he can play 11... CH7-267 · 原书171页 The last continuation can also be brought about by a different series of moves: 11. Ng5 Bxg5 12. Bxh7+, when Black should not play 12... Kxh7 (in which case 13. hxg5+ and 14. Qh5 is extremely strong) but 12... Kf8! 13. hxg5 Qxg5, ending with the position described above. These possibilities are worth getting to know well, since we are dealing with a typical position. Particularly important is the significance of Black's ...f5 in this kind of position: if White does not take the pawn at once en passant, the sacrifice on h7 is prevented directly; while if he takes it, then it is indirectly thwarted or at any rate made weaker, since White's pawn has disappeared from e5.	CH7-267 · 原书171页 最后一个变化也可由不同次序形成：11. Ng5 Bxg5 12. Bxh7+，此时黑方不应12... Kxh7（那样13. hxg5+接14. Qh5极强），而应12... Kf8! 13. hxg5 Qxg5，得到上述局面。这是典型局面，这些可能性值得熟悉。尤其应注意黑方...f5的意义：白方若不立即吃过路兵，h7弃象就被直接阻止；若吃过路兵，由于e5兵消失，弃象也会被间接化解，或至少减弱。
CH7-268 · 原书171—172页 It is also worth noting that to avert the sacrifice entirely by ...h6 or ...g6 is not a good thing in this position. If 9... h6, White plays 10. He might also have invented something similar (even if he in fact did not) to apply to the ranks. But the diagonals? Well, they are all somehow equally 'elegant, subtle, far-sighted', etc. On the long diagonals (a1-h8 and a8-h1) more kings have already died than in the whole of the world's history; more tragedies have been played out on the classic diagonals (b1-h7 for White and b8-h2 for Black) than in all the world's theatres, and on the developing diagonals (a2-g8 and a7-g1 respectively) there have been more mistakes made than in a large library full of books. Now that we have started on nicknames and epithets, let us bestow on the diagonals a4-e8 and h4-d8 (from White's point of view; a5-e1 and h5-d1 from Black's) the name of pinning diagonals. The reader can think over for himself how much material he has already lost on them.	CH7-302 · 原书175页 塔塔科维尔觉得可以给各条直线加上这样的称号：a线——局面棋型；b线——贪婪；c线——深谋远虑；d线——平淡；e线——危险；f线——诱惑；g线——弃子；h线——好斗。他或许也能为横线编出类似称号，即便实际上没有这样做。但斜线呢？它们似乎都同样“优雅、微妙、深谋远虑”等等。在长斜线a1-h8、a8-h1上倒下的王，比世界历史上死去的国王还多；在古典斜线——白方b1-h7、黑方b8-h2——上演出的悲剧，比全世界剧院里的悲剧还多；而在出子斜线a2-g8、a7-g1上犯下的错误，比一座大图书馆所有书里的错误还多。既然开始起绰号，我们就把a4-e8和h4-d8（从白方看；黑方则是a5-e1和h5-d1）称作“牵制斜线”。读者不妨想想，自己在这些斜线上已经丢过多少子力。

CH7-303 · 原书175页 Just as the rook is the piece suited for play on open files and ranks, so the bishop is the master of the diagonals, indeed they are his raison d'être. At all stages of the game, and especially in an attack on the castled king, marshalling bishops on the diagonals demands great skill. A player's skill, in fact, is often demonstrated by his play on the diagonals, and the impression is then given that 'the slender bishop is subtler than the stout rook'. Putting facetiousness aside, let us now look at the relationship between the lines commanded by the rook and the bishop's diagonals.	CH7-303 · 原书175页 车适合在开放直线和横线上作战，象则是斜线的主人；可以说，斜线就是象存在的理由。在棋局各阶段，尤其攻击易位王时，沿斜线部署象都需要高超技巧。棋手的本领往往就表现在斜线运用上，让人觉得“苗条的象比敦实的车更精巧”。玩笑到此为止，现在来看看车控制的线路与象的斜线之间的关系。
CH7-304 · 原书175页 In the first place, it should be stressed that the fundamental difference does not lie in the number or importance of the squares on the files or diagonals, nor in the weight of operations on them. The differences arise only from the different values of rook and bishop and also from the part played by pawn moves in opening up or blocking a line.	CH7-304 · 原书175页 首先须强调，根本区别不在直线或斜线上格子的数量或重要性，也不在沿线行动的分量。区别只来自车与象的不同价值，以及兵步在打开或封闭线路时所起的作用。

CH7-305 · 原书175—176页 It is harder to sacrifice the more valuable rook than the bishop, and the order of value is even more relevant when it comes to pinning: exchanging a bishop for a pinned rook wins the exchange, while bishop for knight is tit-for-tat, but a rook can only gain from pinning a piece when it takes the queen. The other difference is still more explicit: it is comparatively easy to open up or close a diagonal by the normal advance of one's pawns, but achieving the same object on a file means that the pawn has to make a capture, and this naturally depends on the disposition of one's opponent's pieces; hence, there may be considerable difficulty in opening up a file. If, on the other hand, it has to be closed, an outpost as a rule has to be established; on the diagonals, however, outposts are the exception, since the 'open-shut' game is easily carried out by the pawns. It is in this, ultimately, that the whole 'subtlety and far-sightedness' of the diagonal lies. We shall open a series of examples with a case of pinning on a diagonal. The pinning here is in fact a temporary episode within the whole operation of 'clearing up' on the diagonal, and the end comes with the line being completely breached when the pinned piece is captured.	CH7-305 · 原书175—176页 车更值钱，弃车比弃象更难；牵制时，子力价值的次序更为相关：象换掉被牵制的车是得交换，象换马则价值相当，而车通过牵制获利，只有吃到后才行。另一个区别更明显：通常推进己方兵，就比较容易打开或封闭斜线；但要在直线上达到同样目的，兵必须吃子，自然就要取决于对方子力的配置，所以开放直线可能相当困难。反过来，要封闭直线，通常须建立前哨；斜线上的前哨却是例外，因为兵很容易完成“开关”动作。斜线全部的“微妙与深谋远虑”，归根结底就在这里。我们以斜线上的牵制开始这一组实例。这里的牵制其实只是清理整条斜线过程中的暂时环节，最后吃掉被牵制棋子，彻底打通线路。

CH7-315 · 原书177页 An important point is that, in addition to 'clearing' one's opponent's pieces from a diagonal, cases also occur where one's own pieces prevent it being opened. It is extremely difficult to resuscitate a diagonal on which one has a blocked pawn of one's own. Structurally, it is a similar problem to that of opening a file where a pawn blocks the path of a rook, and it is usually solved in the same way, i.e. by sacrificing a piece on a square controlled by the pawn. Here is an example.	CH7-315 · 原书177页 一个重要问题是：除了清除斜线上的敌子，也会有己方棋子妨碍斜线开放的情况。如果斜线上有己方被封锁的兵，要使它恢复活力就极其困难。在结构上，这与兵挡住车路、需要开放直线的问题相似；通常也用同样办法解决，即在这个兵控制的格子上弃子。下面是一个例子。

CH7-325 · 原书178页 As far as play on the diagonals is concerned, the strength of the central squares on the given diagonals is particularly important. These squares can assist the attacker in setting up outposts, in transferring pieces, and in other operations. Thus one should, as a rule, aim to have such squares protected or even over-protected.
