| CH4-2 · 原书66页<br>Spatial relationships in a mating attack can be observed by examining mating patterns, focal-points, and the roles played by the ranks, files, and diagonals. In this chapter we shall be concerned with mating patterns. This choice has a practical justification in that mating patterns can be more easily remembered than the ways leading up to mate. For this reason mating patterns, even though they occur only at the very end of a mating attack, are fundamental for practical purposes because of the excellent mnemonic assistance which they provide to the player. | CH4-2 · 原书66页<br>通过考察将杀模式、杀王焦点，以及横线、纵线和斜线的作用，可以认识将杀进攻中的空间关系。本章讨论将杀模式。这样安排有实际理由：与通往将杀的具体走法相比，将杀模式更容易记住。因此，虽然将杀模式只在进攻的最后阶段出现，但它能为棋手提供极好的记忆线索，在实战中具有基础性的重要意义。 |
| CH4-3 · 原书66页<br>Our first concern is for the most common mating patterns; these hardly ever occur in the middle of the board, but they are very frequent in the castling area, i.e. near the king's position on the edge of the board. | CH4-3 · 原书66页<br>我们先讨论最常见的将杀模式。它们很少出现在棋盘中央，却经常出现在王城区域，也就是靠近棋盘边缘的王的位置附近。 |
