CH4-2 · 原书99页 **The knight on e5 and d5 (e4 and d4). The pawn centre. Attack with the central pawns. “Hanging” pawns.**	CH4-2 · 原书99页 **e5和d5（e4和d4）上的马。兵中心。以中心兵发动进攻。悬兵。**
CH4-3 · 原书99页 The part of the board which includes the squares e4, d4, e5 and d5 is called the centre. These squares are called central.	CH4-3 · 原书99页 棋盘上由e4、d4、e5和d5四格构成的区域称为中心，这四格称为中心格。
CH4-4 · 原书99页 The arrangement of the pieces in the centre, from where they operate in several directions, might serve as a basis for the construction of very active plans. Many different ideas and combinations have been carried out on this basis.	CH4-4 · 原书99页 棋子位于中心，便能向多个方向发挥作用，为制定积极主动的计划奠定基础。许多不同的构想和战术组合正是由此产生的。
CH4-5 · 原书99页 At the end of the last century the famous American chessplayer, Pillsbury, was able to win a number of interesting games where the basis of the initiative was the planting of a knight on e5. In the 20's and 30's of our century, a plan, where the whole object was the occupation of the d5 square (for Black - d4) with the knight, became increasingly pronounced. The centralised knight, supported by pawns, hampered the activity of the opponent, guaranteed a lasting initiative and frequently brought the champions of such ideas success.	CH4-5 · 原书99页 十九世纪末，美国名将皮尔斯伯里以马占据e5作为夺取主动权的基础，赢下了多盘精彩对局。到了二十世纪二三十年代，以马占据d5格（黑方则为d4格）的计划越来越引人注目。受到兵保护的中心马可以限制对手的活动，确保持久的主动权，常常为采用这一构想的棋手带来胜利。
CH4-6 · 原书99页 We return, in the first instance, to Pillsbury's idea, introduced into international practice at the 1895 Hastings tournament in games against Tarrasch and Schlechter. These proceeded identically up to the 11th move:	CH4-6 · 原书99页 先来考察皮尔斯伯里的构想。他在1895年黑斯廷斯大赛对塔拉什和施莱希特的两局中，将这一构想引入国际赛场。两局在第11步之前的进程完全相同：

CH4-8 · 原书99页 The so-called Orthodox variation of the Queen's Gambit. This variation is also met in our day and consequently continues to be developed, but the proportion of games with it, in comparison with the end of the 19th and the first two decades of the 20th century, was reduced owing to the opening systems which arose on the basis of the reply 1... Nf6. The fact should also be taken into account that methods of play have considerably improved for Black, and White does not succeed in easily obtaining a positional superiority as happened in Pillsbury's time.	CH4-8 · 原书99页 这是后翼弃兵中所谓的正统变例。这个变例至今仍有人采用，也还在继续发展。不过，与十九世纪末及二十世纪头二十年相比，它在实战中所占的比例已经下降，因为以1... Nf6为基础的各种开局体系兴起了。还应指出，黑方的下法已有显著改进，白方不再像皮尔斯伯里时代那样容易取得局面优势。

CH4-10–11 · 原书99–100页 This was nearly always played in the old days. In itself, the plan with the development of the bishop on b7 looks quite logical and does not arouse any objections on principle. But a principal - is a principal and concreteness - is concreteness. Pillsbury was the first to have doubts about the then generally accepted method of play for Black. In the course of time, more and more the shady side of the move... b6 followed by... Bb7 was revealed, and now there is a decided preference for 7... c6 with the aim of preparing an invasion of the Black knight on e4. (7... Ne4 at once is not possible, in view of 8. Bxe7 Qxe7 9. cxd5 Nxc3 10. Rxc3 exd5 11. Rxc7.) Besides this, 7... c6 allows him, in the event of 8. Bd3, to bring about a favourable relaxation of tension in the centre by 8... dxc4 9. Bxc4 Nd5. Practice has shown that in this way Black succeeds in overcoming the difficulties with the development of his queen's flank. **8. cxd5 exd5 9. Bd3 Bb7 10. O-O c5**	CH4-10–11 · 原书99–100页 过去几乎人人都这样走。把象出到b7的计划本身合乎逻辑，从一般原则上看也无可非议。但原则归原则，具体局面归具体局面。皮尔斯伯里是第一个对当时公认的黑方下法提出怀疑的人。随着时间推移，...b6接...Bb7的缺点逐渐显露，如今人们已明显偏向7... c6，准备以马侵入e4。（立即7... Ne4不行，因为8. Bxe7 Qxe7 9. cxd5 Nxc3 10. Rxc3 exd5 11. Rxc7。）此外，7... c6还使黑方能在8. Bd3之后走8... dxc4 9. Bxc4 Nd5，以有利方式化解中心的紧张。实践表明，这能帮助黑方克服后翼出子的困难。 **8. cxd5 exd5 9. Bd3 Bb7 10. O-O c5**

CH4-24–25 · 原书100页 The absence of the knight on f6 was exploited very energetically in the game Pillsbury-Swidersky, played in the international tournament at Hannover 1902: 5. cxd5 exd5 6. e4! dxe4 7. Ne5! with the threat Bc4. After 7... Bd6 8. Qg4! Kf8 9. Bc4 Bxe5 10. dxe5 Qd4 11. Bd5! White obtained a direct attack on the king, stuck in the centre, and achieved victory already on the 30th move. **5... Nf6 6. cxd5 exd5 7. Nf6 6. cxd5 exd5 7. Bb5+**
CH4-26 · 原书100–101页 The planned placement of this bishop is the d3 square, but White gives the check in order to provoke the reply c6, breaking the communication of Black's queen's bishop with the central squares. Such “intermediate" moves, which are made on one's way to solving a particular problem, are of course not detrimental but to the benefit of a thought out plan.	CH4-26 · 原书100–101页 白象预定的位置是d3，但白方先将军，诱使黑方回应...c6，切断后翼象与中心格的联系。这样在实现某个具体目标途中插入的“过渡着”，当然不会妨碍已经想好的计划，反而有助于实施。

CH4-30 · 原书101页 Of course, if the White bishop were standing not on c1, but on g5, as in Pillsbury's games, his position would be even more threatening. Now Black should think about the defence of the h7 square, since after Qh3 threats begin to hang over him.	CH4-30 · 原书101页 若白象像皮尔斯伯里的对局中那样位于g5，而不是c1，白方的威胁还会更大。不过，即便如此，黑方也必须考虑保护h7，因为Qh3之后他就会面临威胁。

CH4-32 · 原书101页 In contemplating a complicated regrouping plan, consisting of the transfer of the king’s knight to d6 and the queen’s to f6 which would have given Black control over the e4 point, he overlooks a little combination, as a result of which White wins a pawn.	CH4-32 · 原书101页 阿拉平打算把王翼马调到d6、后翼马调到f6，加强对e4格的控制。然而，他忽略了一个使白方得兵的小组合。
CH4-33 · 原书101页 Instead of the mistaken retreat of the knight to e8 he should continue 12... Re8 and then... Nf8, defending the main weakness in the castled position - h7. Of course the dominating position of the knight on e5 makes Black's game difficult, but there is a protracted struggle in prospect.	CH4-33 · 原书101页 黑方不应错误地把马退到e8，而应12... He should exchange on c3 and prepare play on the c-file.	CH4-35 · 原书101页 黑方开始执行错误的计划。封闭中心只会帮助白方在王翼进攻；黑方应在c3交换，争取沿c线反击。

CH4-37–39 · 原书101页 There is no sense in White taking the pawn on c4 at the cost of a loss of time and removal of the knight from a strong position. On 19. Nxc4 could follow 19... Qc8 20. Qxc8 Rfxc8 21. Ne5 Rc2 or 21... Bd5 and, despite being two pawns down, Black has a strong initiative.	CH4-37–39 · 原书101页 白方没有必要为了吃c4兵，既损失时间，又让马离开强势位置。19. Nxc4之后可能19... Qc8 20. Qxc8 Rfxc8 21. Now, however, White obtains a mobile pawn phalanx, crossing the frontier, with which it is difficult to contend. **22. dxe5 f6**	CH4-41–42 · 原书101页 阿拉平的防守不佳。可惜，许多棋手陷入困境后都会如此。他必须21... f6，防住白方冲起f6的威胁；22. CH4-62–63 · 原书102页 Without mentioning the fact that the knight f8 already limits, to a sufficient extent, the action of the bishop b1, Black does not find the planning “core" of the position, which consists of the need to loosen the position of the White knight on e5. If it is conceived that the knight has been driven away from the e5 square, then the weakness of the e3 pawn, located on the open e-file, will be highlighted. Black could then with advantage concentrate the action of his heavy pieces on this line. Consequently, Black's plan must consist of the removal of the White knight from its centralised position. The best attempt in this direction would be the move 13... N6d7. The attack 14. Qh5 is repulsed by the reply 14... g6, while after 14. Bxe7 Qxe7 (or 14... Rxe7) 15. Qg4 f6 16. Nxd7 Nxd7 17. Rce1 Qf7, Black's position is quite satisfactory. Thus 11... Re8 is the beginning of a correct plan of play against the "knight on e5", but with his last move Black misses the right way. **14. Bxe4! dxe4 15. Qb3 Ne6 16. Bxe7 Qxe7 17. d5 c4**	CH4-62–63 · 原书102页 姑且不说f8马已经足以限制b1象，黑方没有找到制定计划的核心：动摇e5马的位置。假如这只马被赶走，位于开放e线上的e3兵就会显出弱点，黑方便可有利地把重子火力集中到这条线上。因此，黑方的计划必须以驱逐白方中心马为核心。最好的尝试是13... N6d7。14. Qh5可用14... g6击退；14. Bxe7 Qxe7（或14... Rxe7）15. Qg4 f6 16. Nxd7 Nxd7 17. Rce1 Qf7之后，黑方的局面令人满意。由此可见，11... Re8本是正确对抗e5马的计划起点，但黑方上一步偏离了正确方向。 **14. Bxe4! dxe4 15. Qb3 Ne6 16. Bxe7 Qxe7 17. d5 c4**

In order to unravel his forces somewhat, he gives up the c-pawn and he cannot be blamed for this decision. One can only note that such a crucial move as 13... Ne4 needs to be thought out more carefully and made only when it is a link in the plan and not a tactical operation.	CH4-64 · 原书102–103页 若17... Nf8 18. Rfd1，黑方的局面非常拥挤，因此弃掉c兵不无道理。不过，黑方在走13... CH4-68 · 原书103页 The reader, recalling the principles of planning methods, laid down in the introduction under the sections “Concrete Ideas" and "Dynamics", will undoubtedly accuse Schiffers of insufficiently concrete ideas which led to his serious mistakes on the 13th and 18th moves. CH4-81 · 原书103–104页 In the games we have looked at, the positions with the powerful centralised knight arose from one and the same opening - i.e. the Orthodox variation of the Queen's Gambit. In no way does this mean that the same idea cannot be carried out in other opening systems. White's plan includes the move Ne5, as one of its links, also in another branch of the Queen's Gambit, and (albeit more rarely) in other openings. By taking the position of the knight on e5 from the Orthodox Variation, we only wish to demonstrate the role of the knight in the centre with classical examples.	CH4-81 · 原书103–104页 在上面的例局中，强大的中心马都来自同一种开局：后翼弃兵正统变例。这绝不意味着其他开局体系不能实现同样的构想。在后翼弃兵的其他分支中，甚至在其他开局中，虽然较少见，Ne5也可以成为白方计划的一环。这里选取正统变例的e5马，只是为了用经典例子说明中心马的作用。
CH4-82 · 原书104页 A comparatively new idea is the deployment of the knight on the central d5 square (d4 for Black). The first plans involving this idea could be seen in games played at the beginning of the 20th century, but the widespread use of it came in the 30's, particularly after it was successfully employed in a number of Botvinnik's games. However, it is best not to allow the opponent to create a pawn centre, particularly when it is located on the open files.	CH4-259 · 原书114页 由以上讨论已经可以看出，对抗兵中心的计划分为两个阶段：先遏制中心兵的冲击，再组织力量攻击它们。值得一提的是，中心一旦被封锁，战斗也可能转移到两翼。不过，最好还是不让对手建立兵中心，尤其要防止其在开放线上形成。

CH4-261–262 · 原书114页 Usually the side enjoying the initiative in this struggle is White, since, already with his first moves, he can maintain one of his pawns in the centre. The strategy of Black's opening plan is, for the most part, directed towards the establishment of pawn equilibrium in the centre. Therefore the creation of a pawn centre is a very complicated operation for White, if Black watches his opening moves closely. This occurs in the French Defence (1. e4 e6 2. d4 d5 and already there is equilibrium), the Sicilian Defence (1. e4 c5, preventing the move d4; if now 2. c3, then 2... Nf6 or 2... d5, decisively obstructing White's plan), the Nimzovich Defence (1. d4 Nf6 2. c4 e6 3. CH4-261–262 · 原书114页 白方通常在这场争夺中占据主动，因为他从最初几步起就能以兵占住中心。黑方开局计划的战略重点，大多是建立中心兵的均衡。因此，只要黑方在开局谨慎行棋，白方要建立兵中心就会相当困难。法兰西防御便是如此：1. e4 e6 2. d4 d5，中心已经形成均衡。西西里防御也是如此：1. e4 c5，阻止白方冲起d4；若2. c3，则2... Nf6或2... d5，有力阻碍白方的计划。尼姆佐印度防御中，1. d4 Nf6 2. c4 e6 3. Nc3 Bb4，黑方同样能阻止白方形成兵中心，而且还保留着...d5的选择。许多其他开局也有类似情况。

The fact of the matter is that, after the removal of the Black pawn from d5, White threatens to build up a pawn centre. S. Tarrasch even considered the move 2... dxc4 to be a surrender of the centre and invariably gave it a question mark. This evaluation, however, is dogmatic. Black has quite a few ways of preventing the advance e4, indeed the position of the d4 pawn is also not absolutely stable, in view of the possible breaks... c5 and... e5. Of course the replies 2... c6 or 2... e6, consolidating the d5 pawn, facilitate Black's struggle in the centre, but lead to a comparatively quiet game in which it is difficult for him to obtain counterattacking chances. The move 2... dxc4, however, allows a sharpening of the struggle. In the tense situation created after accepting the gambit, Black can exploit a number of combinational motifs. Thus if White now plays directly for the pawn centre 3. e4, then he obtains nothing in view of the reply 3... e5 (4. dxe5 Qxd1+ 5. Kxd1 Be6 and then... Nc6 with hopes of seizing the initiative). CH4-302 · 原书117页 An interesting moment. If we look at this exchange as a separate tactical operation, then it should be condemned. It also gave rise to criticism by commentators of the game on the grounds that Black, firstly, strengthens White's pawn group in the centre and makes it easier for him to form a pawn centre, and, secondly, opens the b-file and thereby increases the active possibilities of the White pieces on the queen's flank.	CH4-302 · 原书117页 这是一个有意思的时刻。如果只把这次兑换看成孤立的战术行动，它确实值得批评。评注者也正是据此提出异议：第一，黑方加强了白方的中心兵群，使白方更容易建立兵中心；第二，黑方打开b线，增加了白方子力在后翼积极活动的可能。
CH4-303–305 · 原书117页 But nevertheless these considerations do not give grounds to criticise the exchange made by Black, which in fact is a very important link in his contemplated plan. Relying on the pawn tension "d4-c5" (pawn tension - is an arrangement of pawns whereby they attack each other), Black intended to concentrate the action of his heavy pieces on the c-file, and then, by taking on d4 at a suitable moment, to begin active play on this file. lt is unfavourable for White to eliminate the tension himself by dxc5, since after this the c4 point and the c3 pawn turn out to be potential weaknesses for him, subject to attack by the opponent. Consequently, when evaluating a move, it is necessary above all to establish whether or not it is a link in the plan and only then to look at its indefinite tactical significance for the given position.	CH4-303–305 · 原书117页 然而，这些理由还不足以否定黑方的兑换，因为它实际上是黑方整体计划中极为重要的一环。黑方准备保持d4与c5两兵之间的紧张——所谓兵的紧张，就是双方的兵互相攻击——把重子集中到c线，再在适当时机于d4交换，沿该线展开积极行动。白方若主动以dxc5解除紧张，反而不利，因为c4格和c3兵会成为可能遭受攻击的弱点。因此，评价一步棋时，首先应弄清它是否属于某个计划，再考虑它在眼前局面中孤立的战术意义。

True, White obtains a well consolidated passed pawn in the centre, but Black's pieces (particularly the knight) can blockade it effectively from the d6 square, at the same time exerting strong pressure on the opponent's position. However, White is not obliged to play d5. He has formed a pawn centre and under its cover could strive to create more active play on one of the flanks. To counterbalance this, Black must try to organise an attack on the c-file.	CH4-307 · 原书117页 白方确立了对中心的控制，但目前11. d5对黑方还不危险。黑方可用11... e5回应，使白方的王翼象受自身兵链限制。诚然，白方会得到一只受到牢固保护的中心通路兵，但黑方子力，尤其是马，可以在d6有效封锁它，同时向白方阵地施加强大压力。不过，白方并不一定要走d5。他已经建立兵中心，可以在其掩护下争取在某一翼展开积极行动。黑方则应以c线上的进攻相抗衡。

In the endgame, such a superiority is realised quite easily, but this is still a long way off. There is a rather sharp middlegame in prospect, in which neither king can feel secure. This gives Black definite counter-chances, he needs only to complicate the game and avoid exchanges which draw the game closer to an ending. CH4-419 · 原书124页 We refer to the pawn phalanx. This name is given to some (most frequently two) connected pawns, out of which at least one is situated on an open file. The phalanx - this is clearly dynamic, connected with forward movement. This sort of pawn-pair potentially has dynamic power, capable of breaking through the enemy front. The central phalanx with pawns on the d and c-files is a very active weapon. Often another phalanx is met in practice, made up of the e and f-pawns; we give it detailed consideration in the next chapter. Here, however, we stay with the basic aspect of the phalanx, consisting of the “hanging” pawns, i.e. pawns which are situated on two open files and isolated from the rest of the pawn chain. Usually the "hanging" phalanx comes about on the c and d-files, since its formation for the most part is connected with definite opening systems and variations. We look at a few examples.	CH4-419 · 原书124页 下面讨论兵阵。这个名称指若干个相连的兵，最常见的是两个，其中至少一兵位于开放线上。兵阵这一概念强调的是向前冲击的动态力量：这样一对兵具有突破敌方防线的潜力。由c兵和d兵组成的中心兵阵是一件十分积极的武器。实战中还经常出现由e兵和f兵组成的兵阵，下一章将详细讨论。这里先考察兵阵的一种主要形态——“悬兵”，即位于两条开放线上、与其余兵链隔离的两个兵。悬兵通常出现在c线和d线上，因为其形成大多与特定开局体系及变例有关。下面看几个例子。

CH4-422 · 原书125页 White has obtained “hanging' pawns on the d4 and c4 squares. This pawn-group is isolated from the rest of the White pawns; at the same time it is situated on open files and therefore, if it is slowed down, will become an object of attack for the opponent's heavy pieces. Both these factors characterise the weak side of a “hanging centre". But it also has a great quality - mobility. The “hanging centre" is above all a phalanx - and if it gets a chance to display its dynamic virtue and advances, then it might sweep away everything in its path. CH4-454 · 原书126–127页 Here we have a position from the 19th game of the Tarrasch-Chigorin match of 1893.The White pawn on e4 is under attack. Black intends this planned objective, arising from the following considerations: the e4 pawn lacks pawn cover, it is also difficult to defend it with pieces, since White's king's bishop has been exchanged, while it is not so easy to mobilise his queen's rook; finally the central pawns are convenient targets for attack on the open lines - the e-file and the a8-h1 diagonal, which are in Black's hands. CH4-563 · 原书132–133页 There is a quiet opening, where the first skirmish in the centre is a long time coming, and does not bring an advantage to either side. White begins the offensive first with the move f4, which had been tried time and again in practice and, up to this game, given good results for White. Even in the opening stage, Rubinstein thought out a plan of attack on the e4 square and foresaw that it would be weakened by the move f4. The attack launched by White looked dangerous, but required energetic and purposeful execution. Duras was not able to permeate his play with concrete ideas, to map out a clear outline of the objective and a real way of achieving it. Separate passive moves began to interrupt the planned line of his thoughts, the attack came to assume a shapeless character, whereas Rubinstein continued purposefully force pressure on the e4 pawn. Soon this pressure was converted to an energetic attack by nearly all the Black pieces. The central stronghold of White's position - the e4 pawn fell, and this led to a disintegration of his king's flank.	CH4-563 · 原书132–133页 开局平静，中心的第一次交锋迟迟才发生，而且没有使任何一方获利。白方率先以f4展开攻势；这种下法此前已在实战中反复出现，并一直给白方带来好结果。鲁宾斯坦却早在开局阶段便想好了进攻e4格的计划，预见到f4将使它削弱。白方的进攻看似危险，却必须有力而有目的地实施。杜拉斯未能使行棋贯穿具体构想，既没有确定清晰的目标，也没有找到切实可行的实现路径。一些消极招法不断打断原有思路，攻势逐渐失去章法；鲁宾斯坦则始终有目的地加强对e4兵的压力。这种压力很快变成几乎全部黑子共同参与的猛烈围攻。白方阵地的中心支柱——e4兵——终于倒下，王翼也随之瓦解。

He was a master builder of the chess struggle, and precisely for this reason his plans give an impression of solidity and serve as handy material for study. Rubinstein did not like to yield to the area of intuition. He did not confide in many people even his own experiences and again and again was ready to look diligently at each pebble of his building as if he were running across it for the first time. CH4-573 · 原书134页 Nowadays this is a theoretical position, repeatedly met in practice and subjected to thorough analysis. In the majority opinion, Black's good development and firm position in the centre allows one to talk of equilibrium. However, when the present game was played, the opening idea employed by Duras was relatively new and inspired fear in Black: in 9 cases out of 10 White's attack brought him success. Rubinstein was the first to bring to light reliable methods of defence in this position and likewise a deeply founded motive for a counter-initiative and counter-attack.
